Hope Springs Eternal For The 2022 Pink Pedals 4 A Cure Ride In Support Of The Breast Cancer Research Foundation (BCRF)

Richmond, MN | January 3, 2022 - In the spring of 2022, Al Reszel, 63, will once again step back into the saddle of his bicycle with trademark Pink Pedals, and ride in support of his wife Terry, a breast cancer survivor, and to help find a cure. Since 2016, after founding Pink Pedals 4 A Cure I Terry’s Ride (PP4AC), Al and Terry Reszel have traveled 12,000-mile and raised over $32,000 dollars for breast cancer research. The 2022 Pink Pedals 4 A Cure I Terry’s Ride will once again be one for the record books, looking very different from previous cross-country rides, including a series of firsts for Al and Terry.

Previous rides have taken place in the summer months but the 2022 PP4AC ride will take place in the spring, allowing Al and Terry to begin and end the ride before the onslaught of summer searing heat and humidity. While the destination is the same, New York City and the global headquarters of The Breast Cancer Research Foundation (BCRF), Al’s solo bicycle ride will take a more southerly route in 2022. Leaving San Diego in early March, Al will steer clear of his usual northern route and head south, traveling 5,000-miles and 16 states in a little under 55-days.

- MORE -
Survival is a common thread in this historic and heroic story. Love is the needle and needful thing that weaves the threads together to form a narrative born out of determination, courage, and, commitment. Terry Reszel, a breast cancer survivor, having already written her chapter of sufferance and stoicism, steps once again into the multifaceted role of supporter and cheerleader. As he has done multiple times over the course of five years, Terry’s husband Al will reprise his role as a solitary bicyclist in search of a cure, endeavoring to take on another herculean cross-country solo bicycle ride, for the love of his wife, for breast cancer survivors worldwide, and to help bring relief and hope for those currently battling breast cancer.
